1 2	1. The first step in the process of identifying a problem is to define the problem. This involves identifying the symptoms and the underlying causes of the problem. Once the problem has been defined, the next step is to develop a plan of action to address the problem. This plan should be based on a thorough understanding of the problem and the resources available to address it. 2. The second step in the process of identifying a problem is to gather information. This involves collecting data and information about the problem and the resources available to address it. This information should be used to develop a plan of action to address the problem.	3. The third step in the process of identifying a problem is to develop a plan of action. This involves identifying the steps that need to be taken to address the problem. The plan should be based on a thorough understanding of the problem and the resources available to address it. Once the plan has been developed, the next step is to implement the plan. This involves taking the steps that have been identified in the plan and putting them into action.
4 5	4. The fourth step in the process of identifying a problem is to implement the plan. This involves taking the steps that have been identified in the plan and putting them into action. This step is often the most difficult, as it requires a commitment to the plan and the resources to implement it. 5. The fifth step in the process of identifying a problem is to evaluate the results. This involves assessing the progress made towards the goal and identifying any areas that need further attention. This step is important to ensure that the plan is working and to make any necessary adjustments.	6. The sixth step in the process of identifying a problem is to communicate the results. This involves sharing the results of the process with the relevant stakeholders. This step is important to ensure that everyone is aware of the progress made and to gain support for the plan.
7 8	7. The seventh step in the process of identifying a problem is to monitor the progress. This involves keeping track of the progress made towards the goal and identifying any areas that need further attention. This step is important to ensure that the plan is working and to make any necessary adjustments. 8. The eighth step in the process of identifying a problem is to evaluate the results. This involves assessing the progress made towards the goal and identifying any areas that need further attention. This step is important to ensure that the plan is working and to make any necessary adjustments.	9. The ninth step in the process of identifying a problem is to communicate the results. This involves sharing the results of the process with the relevant stakeholders. This step is important to ensure that everyone is aware of the progress made and to gain support for the plan.
9 10	9. The ninth step in the process of identifying a problem is to monitor the progress. This involves keeping track of the progress made towards the goal and identifying any areas that need further attention. This step is important to ensure that the plan is working and to make any necessary adjustments. 10. The tenth step in the process of identifying a problem is to evaluate the results. This involves assessing the progress made towards the goal and identifying any areas that need further attention. This step is important to ensure that the plan is working and to make any necessary adjustments.	11. The eleventh step in the process of identifying a problem is to communicate the results. This involves sharing the results of the process with the relevant stakeholders. This step is important to ensure that everyone is aware of the progress made and to gain support for the plan.

The image shows a sample page from a document generated by mPDF. At the top, there is a header bar with 'mPDF' on the left, 'Page Number' in the center, and 'Page Size' on the right. Below the header, the page number '12' is displayed. The main content area features a large heading 'PAGE ORIENTATION' followed by several paragraphs of placeholder text. The text is rendered in a serif font and includes various line lengths and indentations to demonstrate the rendering capabilities of the mPDF library. The page is oriented horizontally, and the overall layout is clean and professional.
